

BETALIGHT

when reliability really counts

Spot indicators

Tritium illuminated Self-Powered, Spot indicators, indicating your important spots, switches in low visibility and blackout conditions.

Key Features

- Range of colours, shapes, sizes available for multiple solutions
- Visible up to 30 metres
- No batteries or bulbs required
- Maintenance-free, operation life of 10 years
- Unaffected by humidity and temperature
- Fully waterproof
- Tough, impact resistant yet lightweight and integrated
- Viewing angle 180°

Performance

Betalight b.v a continuous and secured light source that enables immediate identification in partial and complete darkness. The lens on top of the Betalight enhances visibility. Spot indicators can be placed on switches, around keyholes, or wherever preferred.

Typical Applications

- Illuminated essential equipment
- Illuminated door handles
- Illuminated Key holes
- Illuminated button
- Wherever reliable illumination is required

Usage

They are self-illuminating. They do not require an external power supply, e.g. batteries or bulbs. They will remain continuously illuminated, even during prolonged periods of darkness. Illumination is powered by Betalights®, gaseous tritium light sources that provide an absolutely reliable luminance throughout their practical life of 10 years. They contain no loose parts or unsustainable components (such as batteries, bulbs or switches). the self luminous doming markers are suitable for use in hazardous atmospheres and will operate normally in adverse environmental conditions, even when immersed in water.
