when reliability really counts

GLOWPAD

9.5 cm

14.5 cm

16 gr.

The glowpad is a revolutionary and easy-to-use improvement of the glow stick. The glowpad is innovative because of its light as a feather weight, 8 day luminescence, flexibility, and dependability. This illumination tool is made of a flexible plastic containing a thin-walled aluminium laminate and looks similar to a flat pharmaceutical package with blister/pockets.

TYPICAL APPLICATIONS

- Personnel / convoy identification
- Route safety: marking of steps / hazards
- SOS situations / pathway marking
- Traffic control / Vehicle marking
- LZ/ DZ / obstacles / equipment marking
- Small room illumination
- Instructions and directions sign

When the aluminum blisters are pressed, the thin aluminum wall is broken, realising the fluorescent solution allowing the user to control brightness and number of activations. A variety of non- radioactive, non-toxic, and non-harmful colors are available.

KEY FEATURES

- Activation of individual light cells up to all pad cells
- Eight different colours available including infrared
- Custom made legends/graphics on request
- Control over the illumination intensity and duration
- Lighting time: 4 to 12 hours when all cells are activated at the same time and up to 96 hours on individual cell activation
- Easy to camouflage / visible up to 360°
- Shock resistant
